

Total damping rate, radiative plus turbulent

frequency (c/d)

10^0

10^1

3 radiatively driven modes net damped once γ_{turb} is included

total rate $|\gamma_{\text{rad}} + \gamma_{\text{turb}}| \text{ [s}^{-1}\text{]}$

10^{-5}
 10^{-6}
 10^{-7}
 10^{-8}
 10^{-9}
 10^{-10}
 10^{-11}
 10^{-12}

10^{-4}

10^{-3}

mode frequency $\omega \text{ [rad s}^{-1}\text{]}$

- damped, $4 \leq l \leq 25$ (daughter net), radiative only
- damped, $l \leq 3$ ($\gamma_{\text{rad}} + \gamma_{\text{turb}}$)
- driven, $l \leq 3$ ($\gamma_{\text{tot}} < 0$)
