

Two routes to a daughter, at parent amplitude 10^{-6}

(a) direct: $A_x/A_a = \mu A_b$

(b) parametric: A_{dau}/A_a at the eq. $\sim A7$ fixed point

wide sweep, $l_{\text{max}} = 6$; driven sum mode only, $m = (0, 0, 0)$, $\gamma_{\text{rad}} + \gamma_{\text{turb}}$
