

Total damping rate, radiative plus turbulent

frequency (c/d)

10^0

10^1

10^2

3 radiatively driven modes net damped once γ_{turb} is included

total rate $|\gamma_{\text{rad}} + \gamma_{\text{turb}}| \text{ [s}^{-1}\text{]}$

10^{-4}

10^{-6}

10^{-8}

10^{-10}

10^{-12}

10^{-14}

10^{-4}

10^{-3}

mode frequency $\omega \text{ [rad s}^{-1}\text{]}$

- $\circ$ damped, $4 \leq l \leq 25$ (daughter net), radiative only
- $\bullet$ damped, $l \leq 3$ ($\gamma_{\text{rad}} + \gamma_{\text{turb}}$)
- $\blacklozenge$ driven, $l \leq 3$ ($\gamma_{\text{tot}} < 0$)
